Liftease

Features:

- Increased cow comfort
- Enhanced safety for cow and handler
- High strength and durable
- Designed to fit onto silage forks

Product Information:

Liftease has been developed to improve usability and outcomes from existing sling–lift devices. Firstly, Liftease is very strong. We do not believe it can be damaged in use. Liftease is designed to increase cow comfort by preventing or reducing sweating inside fully enclosed slings. When used for longer periods, these can lead to skin ulcers and damage. Liftease is easy to use. It is recommended that the cow is first lifted by a hip–clamp device, but if such a device is not available, the cow can be rolled onto the Liftease or the Liftease can simply be pulled through under the down animal. The Liftease lift straps each have three lift loops, to give variation of lift height. These loops are designed to fit on a silage fork, and are less likely to slip off than metal hooks. Liftease is designed to lift up to 2,000kg without risk. Liftease can equally be used for horses.
