

Farmhand Spreaders

Features:

- Range of push, tow-along and hand-held spreaders
- For use with granulated fertiliser and grass seed
- Different sizes available
- Range of pneumatic tyres

Product Information:

Farmhand is for the larger garden and lawn jobs that are still most easily accomplished with a push-type spreader.

These machines are on pneumatic tyres. The gearbox will stand some decent wear and tear with a 13cm crown wheel. The large-quadrant

flow control mechanism is easy to operate for accurate, incremental sowing rates, and features an adjustable stop device so exact rates can be set and repeated.

Hopper capacity is up to 56kg. Spread width is 4-6m, depending on material being applied. The whole unit is mounted on a sturdy pipe frame. Handles are full height for stoopless operation. A transparent hopper cover is supplied.

NB: Some assembly with regular home handyman tools is required on receipt.
