

# ColostroStart Colostrum Bags

## Features:

- Makes colostrum management easy
- Lay flat bag storage for quick freeze and thaw
- Supplied with teat drench probe

## Product Information:

ColostroStart colostrum bags make colostrum milk management easy and give your new-born calves the correct start in life.

Delivering up to four litres of colostrum 'gold' (measuring BRIX 22+ on a refractometer) within the first twelve hours of life is crucial in meeting calves' immunoglobulin (IgG) and nutrient needs and ensuring that calves develop and strengthen their immunity from birth.

Create a store of frozen colostrum 'gold' so that this can be quickly sourced and delivered to each new-born animal

entering your herd. 4L aluminium bags are easily filled with a funnel and allow the milk to be laid flat for a quick freeze and quick thaw (pasteurisation optional) without issue. Bag can be written on to show, Cow (Dam), Date and Quality. To administer the colostrum, simply screw on the teat or drencher probe. Each ColostroStart bag has a comfortable handle for easy handling and delivery. Set-10 contains: 10x bags, 1x teat, 1x drench probe. Set-50 contains: 50x bags, 3x teat, 3x drench probe. Replacement bags, teats, and drench probes also available.

Optional, reusable fabric feeding bag also available for purchase. Useful when wrangling slippery wet calves. Carry across the shoulder and can be lowered when inserting the drench probe or hang from a rail when teat feeding.
