

Trap Magpie

211 234

INSTRUCTIONS FOR USE

The ideal trap for live capture of magpies.

- Quick and easy capture
- Catch multiple birds
- Flat pack for easy storage
- Use bait, decoy, or live bird to lure

Diameter: 80cm. Height: 32cm. Dry Weight: 5.31kg

Tools required: Pliers, cage clips or wire & wire cutters (not supplied).

NOTE: ASSEMBLY REQUIRED. Cage is flat packed for shipping.

10789

Product Use:

Large round cage trap with four entrances so multiple birds can be caught at one time.

Green epoxy finish preserves the magpie trap from the effects of time and blends in much better with the landscape, increasing its trapping potential.

Each entrance is a separate compartment where bird cannot escape or eat bait or decoy. Falling doors are triggered by tilting perch.

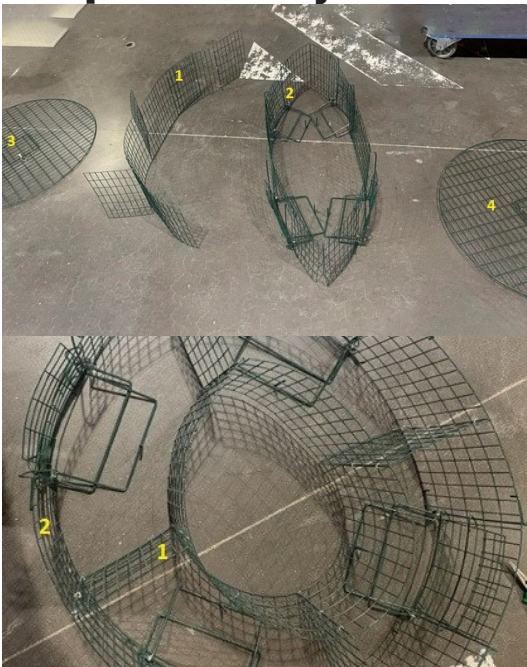

A separate central round cage area is for placement of bait or decoy bird - ideally a decoy bird from a different area is used (to be fed, watered in the central cage for short periods as others are caught).

The bait or decoy is the most important element of this trap, if one type is not successful, another must be tried.

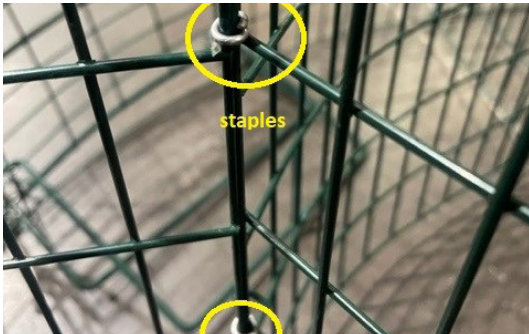

This cage creates many catches mostly from spring onwards, the period of reproduction and births.

Trap should be placed in an open area, not under a tree.

Trap Assembly:

1. Remove components from packaging and lay out on ground.
2. Set the outside cage (2) up in a circle. Set up the inner cage (1) inside the outside cage in a circle with cage dividers facing out.

3. Use wire/clips/staples to attach compartment dividers to outside cage.

4. Take the cage top (3) and attach this using your wire/clips/staples and pliers.

5. Attach the spring.

6. Turn cage over and attach the cage base (4) last.

7. Ensure the trap doors are fixed in the correct direction (see photo).
