

Marker Foam

Features:

- Enables accurate chemical application
- Long-lasting
- High adhesive factor
- Highly reliable

Product Information:

A highly concentrated foam detergent to be used in suitably equipped booms, wipers and other application equipment to identify spray swath width for pasture, turf, crops and direct drilling.

The high-density stable foam enables accurate chemical application by assisting with precision placement of spray runs. Avoid spray misses and ensure complete coverage whilst avoiding costly run overlaps. Particularly useful when spraying pre-dawn or early-twilight as the foam reflects headlights.

Our Marker Foam has proven itself over many years use, to be highly reliable, stable and long lasting (4hrs) on the ground and the high adhesive factor resists wind movement on plants or bare ground. To use mix one litre of foam concentrate in 100 litres of very clean water. With a suitable foam generator, ground speeds up to 20kph are still effective.
