The Heat output from the Pet Pad is low and similar to an electric blanket on its lowest setting.

Note: When plugged in the pad wont immediately feel warm and will not feel warm while exposed to the air.

- The Pet Pad is designed to work with a thin material cover.
- When the pad is placed on a blanket or bedding, your pet will feel the warmth generated as it lies on the pad.
- The material underneath the pad can be varied to change the temperature of the pad as defined below.
 - If the pad is too cold, add additional bedding / blanket(s) underneath the pad.
 - If the pad is too hot, remove bedding / blanket(s) underneath the pad.

You can test the warmth of your pad by placing your hand between your pet and th top surface of the pad.
